cutoff

# Contractor Duty Series wood cutting radial arm saws

[www.originalsaw.com](http://www.originalsaw.com) see website for details, videos, specifications

The Contractor Duty Series is an industrial rated machine that has the versatility to crosscut, bevel cut, miter cut, and swivel to a rip position to cut down panels precisely and accurately. These machines are well suited for cutting off up to 3" material, as well as cutting off 24" wide panels for squaring shelving and doors and other similar applications. These machines are found in small lumber yards, custom cabinet shops, schools, contractor shops, crating departments or anywhere smaller material is being cut off, miter cut, bevel cut, sized or dado work is being done.

The Contractor Series continues to be a workhorse with a TEFC motor and internal automatic brake, as well as a new, more durable powder coated finish. This series gives the best cut quality in its class and is a very precise cutting machine with repeatable accuracy that can be depended on day after day for years to come.
